

What We Do

Eagle Network Solutions is a Vermont-based small business delivering top-tier talent and reliability to the Federal Government and Federal Prime Contractors. We provide a full suite of staffing and field deployment services as well as engineering consultation and planning, turn-key engineering, and technology resale services. From Japan to Virginia, ENS personnel are currently staffing positions on programs critical to the safety and well being of our country. Our clients include the Pentagon Renovation Program, the Missile Defense National Team, General Dynamics, & Lockheed martin.

How we do it

Eagle Network Solutions employs a standards-based approach to the development of information technology infrastructure that is currently being used in some many of our nation's critical communication environments. It is our belief that a clearly defined process, exacting technical standards, and real talent work together to protect our soldiers, our government, and our clients.

Our Process

In many instances, our employees and contractors are individuals whose technical proficiency has been demonstrated in the field. They have gained our hard-won respect by demonstrating their talent and reliability under the pressure of complex projects and critical deadlines.

Our recruiters work closely with our Chief

"...delivering top tier talent and reliability."

Technology Architect and lead engineers. Together they maintain a rigorous screening process that includes an extensive technical evaluation conducted by a member of our engineering team with expertise relevant to the candidate's skill set and the position under consideration. We are able to accurately assess technical qualifications and the limits of a candidate's abilities across a wide range of IP and telephony technologies including: voice, video, data and SATCOM engineering.

What We Sell

In addition to staffing services, field deployment, and turn-key engineering, ENS sells

The Big Picture

Extensive Recruiting Capabilities

Global Field Deployment

Long-term & Surge Staffing

Cleared and Uncleared Personnel

technology designed to service Homeland Security, Public Safety, Emergency Response, and base-level wireless communications needs. We take a client-focused approach when selecting technology, working to always insure vendor-neutrality and a rock-solid solution.
