

Eagle Network Solutions Meets Field Communications Needs of First Responders and Military with the FALCoN™

Compact, rapidly-deployable, self-contained communications node provides critical connectivity for voice and data in disaster and war-zones

BURLINGTON, VT, July 28, 2008 – Eagle Network Solutions (ENS), a technology engineering and research firm with a focus on critical voice, video, data and convergent networks, now offers the Forward Area Lightweight Communication Node (FALCoN™), a highly portable, mobile, compact IP system that delivers Voice-over-IP (VoIP), data and surveillance capabilities. The FALCoN serves as a single robust mobile communications solution anywhere in the world using a variety of connectivity options. ENS now offers the solution directly to military, government agencies and first responders.

The FALCoN is an extremely portable system and is hardened to withstand the extreme conditions of first responder and military field deployment. Weighing less than 40 pounds, it easily can be stored, transported and deployed to virtually any disaster location in extreme environmental conditions while establishing and maintaining complete data, voice, and video communications. Developed by RouteStep Communications, the FALCoN ensures communications connectivity in the field, dramatically improving both military and first responder capabilities.

“At Eagle Network Solutions, our focus is on providing military and government agencies with the communications infrastructure necessary to operate worldwide,” said Jason Zuliani, Director, ENS. “For first responders and military personnel in the field, communication is absolutely critical for success. The FALCoN’s unique combination of compact portability, extreme durability and robust communications capabilities makes it the ideal solution for critical field deployment.”

The individual FALCoN unit is small enough that it meets FAA carry-on luggage size restrictions and includes pull-out handles and inline wheels. The networking components of the FALCoN are integrated into a rugged, injection-molded case that is dust-resistant, moisture-resistant, and crush resistant, enabling the unit to take punishment in the field while protecting the mission-critical electronics inside.

In addition to selling the FALCoN, ENS now offers related services, including training and setup. To receive a complement copy of the FALCoN white paper, email Jason Zuliani at the address below.

About Eagle Network Solutions

Eagle Network Solutions, LLC, is a Vermont-based telecommunications firm delivering top-tier talent and reliability to the Federal Government and Federal Prime Contractors.

ENS provides a full suite of staffing services as well as engineering consultation and planning, and specialized technology resale services. ENS' personnel and technology are deployed worldwide on programs critical to the safety and well being of the United States.
